PIQUANTS.
The world's greatest want at the present time is men and women who shall quietly do their own duty and not tell any body of it.

When Dr. Johnson had completed his dictionary, which had quite a run in the papers of Mr. Andrew Miller, his bookseller, the latter acknowledged the receipt of the last sheet in the following manner: Andrew Miller sends his compliments to Dr. Samuel Johnson with the money for the last part of the dictionary, and thanks God for his share with him. Johnson replied he was happy to find Mr. Miller thanked God for anything.

A little boy who lived with a very pious uncle, who was especially careful that his charge should not be injured by overloading, walked out with his guardian one day and met a gypsy, the first he had ever seen. The little fellow looked at the thin, painted, long creature a minute, and then throwing his arms about his neck, exclaimed, "Dear daddy! do you live with your uncle too?"

Paris was recently excited by the announcement that the police had discovered in the Rue St. Malte fourteen loads just severed from the bodies of cats. Many persons who had partaken of "rabbit stew" the evening before, were troubled with symptoms of indigestion.

Douglas Jerrold once went to a party at which Mr. Pepper had assembled some friends, and said to his host on entering the room, "My dear Pepper, how glad you must be to see all your friends ministered."

A countryman was shown Gainsborough's celebrated picture of "The Pigs." "To be sure," said he, "they are deedly like pigs; but there is one fault; nobody ever saw three pigs feeding together but what one of 'em had a foot in the trough."

A New Haven paper, describing the beauties of three prominent institutions of that city, says: "The medical college is on the road to the cemetery; the divinity college on the road to the poor-house; and the law school on the road to the jail."

As a couple of detectives were strolling through a menagerie, one of them pointed to a leopard and said, "Tom, why should we prefer that animal to any other kind?"

"Because he's sure to be spotted," answered Tom.

A lady, whose father's generous living had given her a good education and a comfortable home, consulted Dr. Cheyne, upon surveying herself in the glass, she exclaimed, "Where is the name of wonder, doctor, did I get such a nose as this?" "Out of the deceiver, madam, replied the doctor.

Man is composed of two yards and a half of broadcloth, a shirt collar, and more or less assurance; women of many and various materials, an impression that she is the perfection of possibilities, and a faculty of spending much money and getting next to nothing in return.

Young men who spend a good portion of their time in larding their hair and hats show which side of the skull their talents lie.

"Why, George, what are you looking in the garden for at this time of night?"

"Why, I was awful dry, mother, and don't the little say, 'No, every one that thirsteth?'"

A gentleman was surprised during the cold snap, to see his little daughter bring home from the Sunday school library a grave treatise on "Clock-ticking." "My child," said he, "this is too old for you; you cannot understand it." "I know it, papa," was the reply; "but I thought I could when I took it. I thought it would teach me how to tick backwards."

Tailor's revenge.—Giving a customer fits.

What is the highest pitch of the voice? The place where it sticks.

There are various stations in life; but the best desirable is a police-station.

What is the best remedy for a "dread lock?" A "skeleton key," of course.

The Fenians declare their strength is like a rock. This must surely be a shamrock.

A wealthy widow, advertising for an agent, was overwhelmed with applications. The printer had made it a god.

What is the difference between truth and eggs? Truth crumbled to earth will rise again; but eggs won't.

"I thought you told me, doctor, that Smith's fever had gone off?" "Oh, yes; but it and Smith went off together."

Why are women extravagant in clothes? Because when they buy a new dress they wear it out the first day.

"Husband, I must have some change today." "Well, stay at home, and take care of the children; that will be change enough."

S. D. & H. W. SMITH'S AMERICAN ORGANS.
The American Organ is the only real Organ now before the public. The only Organ having a Revolutionary Sound Box or Wind Chest, which has the same important part to perform as the Sound Box in the Piano. It is a body and a resonance of tone and without which the organ becomes merely a mechanical contrivance. The American Organ not only has the Wind Chest or Sound Box, but has the large Organ Bellows, giving power and great swellings of tone. These with their extreme fine tuning of the Reeds and perfecting of the tone, make them the most perfect Organ known. The great improvements and superiority of tone and workmanship of the American Organ place them in the front rank as the best and most desirable. New Instruments. THE AMERICAN ORGAN, or Organist's Harbor Companion. Mailed free on receipt of \$2.00. Weymouth and Mattapoisett, Tremont, opposite Washington Street, Boston, Mass.

E. B. BATES, East Weymouth.
1-13

BRADLEY'S Super Phosphate

TAKE NOTICE.

Those who have been unable to get any PHOSPHATE for planting, are advised to use it at once. It is a small handful scattered around the plants at this time, and it will be noticed at the end of the season that the plants will be much larger and more vigorous than those which have not been so treated.

A change in color of the plants will be noticed at once, and you will be surprised to see the quick start it gives them, and more surprised at the end of the season to see the large increase of crops, and at an earlier date.

TRY IT, and be convinced.

TERMS

Should never be raised without using 100 lbs. of BRADLEY'S SUPERPHOSPHATE per acre at the time of sowing the seed. It will double the yield, and double the value, as to quality, for feeding stock.

Note the following from the distinguished English Chemist, Dr. Johnston:

"The same kind of crops grown on the same field, one with Phosphate and the other without, and the difference is strikingly different in the proportion of Phosphate contained in the ash of the crops. The crop grown on Phosphate yielded 30 per cent of Phosphate, while the crop grown without yielded only 11 per cent of Phosphate. This could not fail to make an important difference in the relative value for the feeding of stock whose bones are growing, and which require a large amount of Phosphate in their food."

DR. J. W. JOHNSON, F.R.S., L.E., &c.

BRADLEY'S SUPERPHOSPHATE

Where BRADLEY'S SUPERPHOSPHATE has been used in growing Blackberries, the reports of its effects are even more astonishing than those of other crops. Two hundred and fifty to three hundred pounds to the acre, harvested in which the seed, (which is sufficient to make a heavy crop.)

Mr. Agnew, every where are ordered to guarantee it to give satisfaction to all who wish to try it for Blackwood.

MR. J. W. JOHNSON, F.R.S., L.E., &c.

WM. L. BRADLEY,
21 Broad Street, Boston.
SOLD BY DEALERS THROUGHOUT NEW ENGLAND.

A NIGHT AND A DEEP.

This was just the length Paul said he was about, and the hardships he had to go through. He was in a boat, and had not half as much as in which to wear. But ours was a very stout steamer, and is not to be now we are safe on shore.

We came from Florence by rail in the middle of the rainy, but very just the day of all that would think the sea was. We had bought our ticket for the steamer of the Leghorn to Genoa. The mentioned that you of it and never trust you any of the boats of that reason soon to be given. The port we learned that that evening was the lying nearly a mile off in the midst of scores of of course indistinguishable. A little row boat took us out to it. Probably had the shore, we would have to lose the passage money. Another ship. It was a screw, of 200 tons, and by the side of others very diminutive, and by was decidedly repulsive. In her freight, hales in the northern part of shipped to Marseilles. filled to its utmost capacity. Freight was left for which room. We knew that John. Then some key arrived. This was encouraged. It is not usually sent by mail. Then came the mails. more assuring. It was lines: every night from

We went down into was just wide enough for passage between it and. There were but two or a side, but they were sufficient, as we were two or three. It was a Maltese general board and raised the m. It was plain we were on. But the sea was placid, general. The sun had cleared, black mass of clouds country would have passed, but the rough captain in Genoa before daylight was the usual passage. At five, five o'clock freight was on board. We were still at work taking lazy, easy, good-for-nothing boats, was not been anxious to pass. Italian never thinks, a long it takes him to do only thing in the world of it. He can say that as he pleases, and spare. It often takes get a draft cashed at the old clerk, or the old looks at your letters, give one or two others in his at his desk, takes a pipe and asks how you will or paper; returns; rock sin of half per cent; ter over a while; gives mousons blast with a attached; and finally, given two signatures of it is yours. The habit of business prevails ment of life, from the lookman and stevedore. is nothing. The advice sailing is of no account, they are ready, and the get ready. Seven came no signs of sailing. The down into the cabin, took and into it went a little his—more like a sun black with coal and gr him was let down the it away in some place k and the captain. The then closed and the safe. Eight o'clock was all in. Dinner has us in the cabin, for

SELECTED ARTICLES.

A NIGHT AND A DAY IN THE DEEP.

This was just the length of time that Paul said he was nilant, when recounting the hardships he had endured. Doubtless he was in far greater danger than we, and had not half so good a ship as ours in which to weather the storm. But ours was a very small affair of a steamer, and is not to be ill spoken of, now we are safe on shore.

We came from Florence to Leghorn by rail in the middle of the day; a cloudy, rainy, but very calm, dull day; just the day of all others when you would think the sea would be smooth. We had bought our tickets in Florence for the steamer of that evening from Leghorn to Genoa. The line is *Vulery's*; mentioned now that you may take note of it and never trust yourself at sea in any of the boats of that line, for good reasons soon to be given. On reaching the port we learned that the steamer for that evening was the *Fraucis Marie*, lying nearly a mile off in the harbor, in the midst of scores of other vessels and of course indistinguishable from the pier. A little row boat took us and our baggage out to it. Probably had we seen it at the shore, we would have been disposed to lose the passage money and wait for another ship. It was a small iron steamer, a screw, of 200 tons, very narrow, and by the side of others near she looked very diminutive, and being very dirty was decidedly repulsive. She was taking in her freight, bales of hemp raised in the northern part of Italy and now shipped to Marseilles. Her hold was filled to its utmost capacity and some freight was left for which there was no room. We knew that we were "heavy laden." Then some kegs of specie arrived. This was encouraging, for money is not usually sent by doubtful carriers. Then came the mails. This was even more reassuring. It was the regular mail time: every night from Leghorn to Genoa.

We went down into the cabin. It was just wide enough for a table, and a passage between it and the state rooms. There were but two or three of these on a side, but they were sufficiently numerous, as we were the only passengers. My neighbor was a Maltese gentleman came on board and raised the number to three. It was plain we were on the wrong boat. But the sea was placid. The rain had ceased. The sun had gone down in a dense, black mass of cloud that in our country would have presaged a storm, but the rough captain assured us that was not the case. A beautiful night, and he in Genoa before daylight. Eight hours was the usual passage. We were to sail at five. Five o'clock came and the freight was on board. Six and they were still at work taking in. The lazy, easy, good-for-nothing way they hoisted the bales, was amusing, if we had not been anxious to get off. But an Italian never thinks, never cares, how long it takes him to do anything. The only thing in the world they have enough of is time. He can spend as much of that as he pleases, and have plenty to spare. It often takes half an hour to get a draft cashed at your banker's. The old clerk, or the old banker himself, looks at your letters, goes and consults one or two others in the room, sits down at his desk, takes a pinch of snuff, comes and asks how you will have it, in gold or paper; returns; reckons his commission of half per cent; gives the money over a while; thinks his nose a tremendous blot with a silk handkerchief attached; and finally, after you have given two signatures of your name, he gives you a ticket to the cashier who with a small shovel scoops up the gold, and it is yours. The same indolent habit of business prevails in every department of life, from the banker to the boatman and stevedore. Passenger's time is nothing. The advertised time of sailing is of no account. They go when they are ready, and they are ready when it suits their convenience to work and get ready. Seven came and there were no signs of sailing. The captain came down into the cabin, took up a trap door and into it went a little dirty boy of his, more like a son of Vulcan, so black with coal and grim he was. To him was let down the specie; he stored it away in some place known only to him and the captain. The trap door was then closed and the money considered safe. Eight o'clock came and the freight was all in. Dinner had been served to us in the cabin, for which we were

charged extra, having paid an enormous fine—\$6 apiece—for the eight hours sail. Nine o'clock arrived, and soon after the grinding of the screw gave sensible notice that we were under way. Smoothly we passed out of the harbor and weathered by a long and tedious day of waiting, and with no anxious thoughts about the night, we went to bed and to sleep.

"The cradle of the deep" is favorable to sleep. Many sleep more soundly at sea than on shore. Even in storms, the motion, if somewhat uniform, does not always disturb, and the berth is the best refuge for one addicted to the sickness of the sea. About midnight a crash in an empty room roused us from sleep; a shaky berth had given way in a lurch of the ship. The crash of the waves against the vessel, the roar of the wind, the unsteady roll and pitch of the ship, told us very plainly that a gale was on us, all the more unpleasant as it was unexpected. My travelling companion, decidedly more aquatic in his tastes and habits, than his companion, clambered up the stairs to take observations. It was a night when the blackness of darkness was on the face of the deep. Rain poured in torrents in the very thick of a furious gale. All hands were at work lashing everything fast, and putting the little craft in readiness for the worst that might come. For us there was nothing but to wait. In a better ship we would have had no fears of the results. Doubtless the vessel had gone through many worse nights than this, and why not again? Then came the suggestion of faith, hope, and the sweet experience of other dangers past safely, and as hours dragged themselves slowly and drearily along, we used all these sources of comfort and found them good.

At such times one studies the things around him to form some estimate of the rising or subsiding of the gale. The lamp in the centre of the cabin swings freely, and this was a pendulum to mark the length of every roll. At length it motion became too swift for pleasant contemplation, and the glass shade was smitten by striking the ceiling. Now we were in total darkness below. The steward rigged another lamp but it soon went over and out. Every man on the sense of danger became more apparent, yet there was nothing for us to do but to wait. The hours wore on slowly, but the longest and darkest and dreariest night in the world has a morning to it, and we knew there was to ours. A tremendous shock, as if some new engine of destruction had hurled a mountain against the ship, and for a moment she seemed to stop in her course, to shake herself from stern to stern, trembling and uncertain what to do; and then the steady screw screwed on, and the brave little vessel emerged from the wave that snatched and covered her and moved on as before. Again and again, in the thick darkness of that tempestuous night, was she struck, and as often we paused, hesitated, and then plunged along.

And O, how welcome was the morning light! I crept up in my berth to the port-hole above and looked out on the boiling sea; it seemed to be rushing up from some horrid gulf in the bowels of the earth, and making sport of the vessel that danced and rolled and pitched like an egg-shell on the seething cauldron of waters.

At this juncture, word was brought down to us that we had better prepare for the worst, as it was impossible to say what was before us. But there was no preparation necessary, as the ship was the safest place, and one part of it was as safe as another. In a few moments we were reassured. No danger was apprehended. Land was in sight. We knew where we were. That was some comfort. But we were farther from Genoa, our destined port, than when we started ten hours ago. In the darkness of the night it was safer to keep off the coast; we had stood out to sea, and had shot by the port, and now took the back track and toiled on, the storm increasing in fury every hour. The headlands were familiar to the Corsican equiper, a rough fellow, who did his duty under the circumstances, and kept sober, to my great comfort. It was in the afternoon when the City of Palaces—Genoa—the superb—burst upon our sight. The gale had not abated, but the rain had ceased; and the sun was struggling through the clouds, and a blessed beautiful rainbow was spanning the city, with its arch of hope! In 1462 a son of Genoa discovered America. Not to him was the sight of the land more grateful than that of his native city was to us from the land he found. Our sailors shook hands, laughed, leaped and danced for joy. Above the roar of the winds and waves I heard the captain. The trap door was then closed and the money considered safe. Eight o'clock came and the freight was all in. Dinner had been served to us in the cabin, for which we were

charged extra, having paid an enormous fine—\$6 apiece—for the eight hours sail. Nine o'clock arrived, and soon after the grinding of the screw gave sensible notice that we were under way. Smoothly we passed out of the harbor and weathered by a long and tedious day of waiting, and with no anxious thoughts about the night, we went to bed and to sleep.

"The cradle of the deep" is favorable to sleep. Many sleep more soundly at sea than on shore. Even in storms, the motion, if somewhat uniform, does not always disturb, and the berth is the best refuge for one addicted to the sickness of the sea. About midnight a crash in an empty room roused us from sleep; a shaky berth had given way in a lurch of the ship. The crash of the waves against the vessel, the roar of the wind, the unsteady roll and pitch of the ship, told us very plainly that a gale was on us, all the more unpleasant as it was unexpected. My travelling companion, decidedly more aquatic in his tastes and habits, than his companion, clambered up the stairs to take observations. It was a night when the blackness of darkness was on the face of the deep. Rain poured in torrents in the very thick of a furious gale. All hands were at work lashing everything fast, and putting the little craft in readiness for the worst that might come. For us there was nothing but to wait. In a better ship we would have had no fears of the results. Doubtless the vessel had gone through many worse nights than this, and why not again? Then came the suggestion of faith, hope, and the sweet experience of other dangers past safely, and as hours dragged themselves slowly and drearily along, we used all these sources of comfort and found them good.

HOW BLAD AT THE SLAVE WEDDING
OF MR. AND MRS. Z. L. RICHMOND,
OF EAST WEYMOUTH, MAY 20, 1868.

BY MISS H. G. GARDINER.

They were married in May, the beautiful May,
When the warm, blue light of the spring,
From the grass of the meadows was canted
And the dewdrops were shining
And the birds were beginning to sing.

On the May in those days was not like our May;
When the sun was so hot and so fair,
And the birds were so full of the long sunny day,
And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining

And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

And the dewdrops were shining
And the birds were beginning to sing.

Very well, that will be easy enough.

A dime is no great harm. But may I

know what you are going to do with this

newly commenced paper?

"Lay it by for a rainy day," answered

Caroline.

Charles laughed merrily.

This ended the conversation for the time.

The plan inaugurated by the young

wife was steadily carried out. She was

no one of those (of whom there are so

many) who enter upon a plan zealously,

but soon tire of it. In the present case

she was thoroughly satisfied of the wisdom

of her purpose, and resolved to carry it

through. Every morning she called up

her husband for a dime, and every

morning it was added to the accumulation.

Frequently he had not the exact change,

but would lose her a quarter instead.

She would assure him, laughingly, that

it would answer her purpose just as well.

At the close of every month the tin

box was emptied, and the contents were

transferred to a savings-bank of more

position, where interest would be allowed.

When the sums deposited here became

large enough, Mrs. Lyndon, who had

remarkable business capacity, withdrew

them, and invested in bank and other

stocks, which would yield a larger per-

cent. Of her mode of management her

husband remained in complete ignorance.

Nor did he ever express any desire to

be made acquainted with his wife's man-

agement. He was an easy, careless fel-

low, spending as he went, enjoying the

present, and not feeling any particular

concern about the future.

At the end of eight years, during which

he had been usually favored by propi-

ties in business and uninterrupted health,

his looks showed that he had not exceed-

ed his income, but that, on the other hand,

he had saved absolutely nothing. Twen-

ty-five cents stood to his credit.

"Running pretty close, and it's Charles'

I take credit to myself, though, for keep-

ing on the right side of the line. But

then I suppose you have saved up a fair

amount now?"

"No much do you suppose? A few

dollars, I think."

"Oh, perhaps a hundred dollars," said

Charles Lyndon, carelessly, though it

would take a good many dimes to make

that."

His wife smiled, but did not volun-

teer to enlighten him as to the correctness

of the conjecture.

Settling went on till at length came

the year of 1857—a panic season to it

that it will be remembered how miserably

trade and business of every kind were

pressed at this period—among others,

the trade which occupied Charles Ly-

ndon's full time.

One evening he came home looking

quite serious in expression, which sel-

dom came over his cheerful face.

Caroline, who had watched the signs

of the times, was not unprepared to see

this. She suggested that her husband's

business would be affected.

"What is the matter, Charles?" she asked

cheerfully.

"The matter is, that we will have to

economize greatly."

"Anything unfavorable turned up in

business matters?"

"I don't think there had. I will have

to hold a day's work for some time to

come, and I am afraid that even this

will not before long. You haven't an idea,

Charles, how dull business of every kind

has become?"

VISIT TO THE MOON.

People may have heard of the world

renowned adventures of Daniel O'Rourke,

but how few are there who know that the

cause of all his perils, above and below,

was neither more or less than his having

slept under the walls of Phoska's tower.

I knew the man well; he lived at the

bottom of Hungry Hill, just at the right

hand side of the road as you go towards

Bantry. An old man was he at the time

when he told me the story, with gray hair

and a red nose, and it was on the 25th of

June 1813 that I heard it from his own

lips, as with an air of contentment he

sat smoking his pipe under the old pop-

lar tree, on a fine evening as ever

shone from the sky. I was going to visit

the caves at Dersey Island, having spent

the morning at Glengriff.

"I am often asked to tell it," said he,

"so that this is not the first time. The

master's son, you see, had come from his

young foreign ports in France and Spain,

and young gentlemen used to go, before

FOR THE AGENTS

THE GRACE is, like, it is. The only book that has been translated by the author of the author is well known as a man of letters and a brilliant conversationalist. A good find this one of it. Interesting for the reader, as well as for the writer, is that it is a book of letters. For particulars, address S. C. C. Co., 126 Avenue C, St. Harrison.
